

When Accountability Matters

One Touch adds Virtual Interactive Keypad for PC's and Mobile Devices

The One Touch® Virtual Interactive Keypad is an essential part of distance learning; providing a flexible solution that enables corporate communication, training, and academic preparation on PCs, laptops and mobile devices. Organizations can easily communicate and maintain the accountability of a widely dispersed audience.

The One Touch® Virtual Interactive Keypad is an intuitive software application designed with all of the accountability features for learning and communication.

Key Features

- **Accountability** - All responses are directly linked to the student and recorded in a database instantly available to the instructor.
- **Interactivity** - A live classroom environment is emulated by the ability to respond to real time pop questions and quizzes, which are immediately displayed in graphical format on the instructor console and optionally to the classroom.

Interactivity Features

Raise a Hand

Students can get the attention of the presenter and be seen on a presenter's monitor by virtually "raising their hand" with the Call Key feature.

Response to Polling

The Flag Key allows participants to anonymously respond to polling.

Answer questions and a quiz

Virtual Interactive Key pad displays course related questions or quizzes for participants to answer in real time.

Multiple User Capability

With the Virtual Interactive Keypad, multiple users can log into a single computer where personal computer and network bandwidth are limited.

Enhance your live, visual communication and training with the One Touch mobile, real time **interactive** solution

Scalability

The Virtual Interactive Keypad provides an unparalleled scalability, capable of supporting a vast range of dispersed participants. A simple server selection option allows hundreds of users to log into their appropriate session.

IT Friendly

- Compatible with any real time business TV (BTV), video conferencing/video streaming media, and Internet webinar on your corporate network.
- Conveniently supported zero footprint, browser based client on most handheld smart phones (e.g. iPad, iPhone, Android, GPhone and Blackberry) and thin clients for desktop PCs.

Low Bandwidth Network Support

- Internet or IP Corporate network
- Video conferencing network
- VSAT satellite network
